

Annotation summaries by detection and prevalence

A Active-phase-up annotation

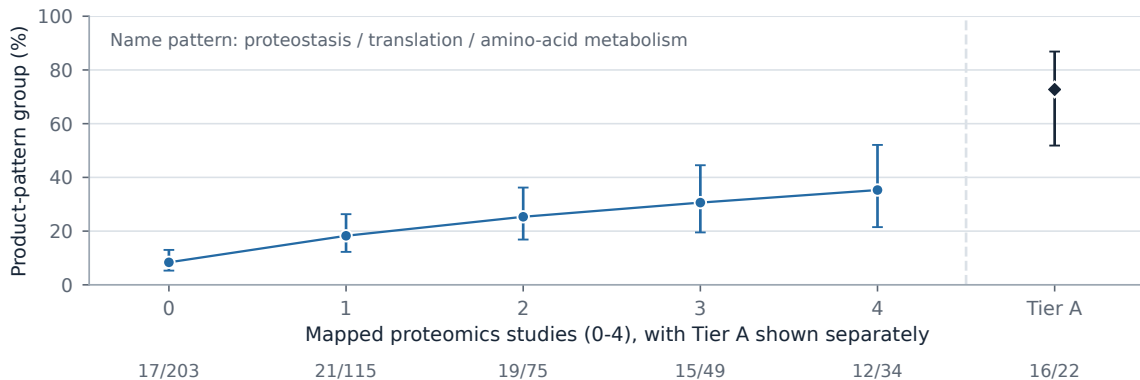

k/n: 6/35 25/54 25/46 24/34
 17/80 10/21 2/3 0/0
Mean per-family up/mapped: 22.3% vs 22.3%

B Condensate rank by prevalence

k/n: 5/38 5/50 15/119 39/162
 29/595 34/328 3/11 0/0
Limited overlap: Highly Pure n = 11 at 80+ carriers

C Product-name matches across detection strata

Points: family proportions. Bars: descriptive 95% Wilson intervals; k/n counts appear below each panel.
Families are not independent replicates. Product-name groups are heuristic; Tier A overlaps detection strata.
