

Protein-family
atlas

Two candidate
inventories

Candidate
annotations

Biological context
for candidate selection

426 assemblies

nifHDK labels

nifH

nifD

nifK

MMseqs2
family
matrix

426 × 2,286

Genus-blocked
prediction

Training-fold filters

Figure 2

High purity

981

families

High-purity
diazotrophy context

Residual
association

476

families

473 candidates
+ 3 controls

Active-phase-up
proteomics

Genus-based
morphotype proxies

Condensate-
driver ranks

Redox and
electron flow

Fe-S and
cofactor handling

Carbon and
fixed-N
metabolism

Protein and RNA
maintenance
